Are you looking for a highly qualified partner for your next construction project?

Unlike other construction companies that still use construction methods and materials deemed to be environmentally unfriendly, the Bulsho Eco-Construction is introducing modern materials prepared and developed with the welfare of the environment in mind. The company also installs renewable energy sources and clean drinking water for all of its construction projects.

▶ OUR PRODUCTION MATERIALS AND SERVICES

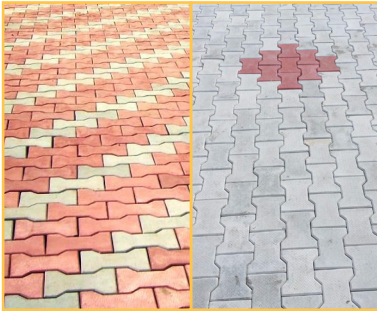

A. PAVER BLOCK, ALSO KNOWN AS INTERLOCK BLOCK OR CABRO

Bulsho Eco-Construction offers pavers blocks for both commercial and residential building solutions. The company provides pavers blocks for drive ways, trailer paths and other road works.

Descriptions

			DAMRU PAVER BLOCK	
Color		Red, Grey, Yellow, black, green		
Material		Cement, Concrete		
Finish		Not glossy		
Type		Outdoor		
Price		\$ 11 - 16 per m ²		
			ZIG ZAG PAVER BLOCK	
Color		Red, Grey, Yellow, black, green		
Material		Cement, Concrete		
Finish		Not glossy		
Type		Outdoor		
Price		\$ 11 - 16 per m ²		
			COSMIC PAVER BLOCK	
Color		Red, Grey, Yellow, black, green		
Material		Cement, Concrete		
Finish		Not glossy		
Type		Outdoor		
Price		\$ 11 - 16 per m ²		

I Shaped PAVER BLOCK

Color	Red, Grey, Yellow, black, green
Material	Cement, Concrete
Finish	Not glossy
Type	Outdoor
Price	\$ 11 - 16 per m ²

EYE PAVER BLOCK

Color	Red, Grey, Yellow, black, green
Material	Cement, Concrete
Finish	Not glossy
Type	Outdoor
Price	\$ 11 - 16 per m ²

DAMRU PAVER BLOCK

Color	Red, Grey, Yellow, black, green
Material	Cement, Concrete
Finish	Not glossy
Type	Outdoor
Price	\$ 11 - 16 per m ²

B. BUILDING AND HOUSING CONSTRUCTION

I. Stretcher Blocks

Bulsho Eco-Construction obtains its name from Stretcher Blocks; our company offers cost-effective building solutions in both private, commercial and public sector.

To improve soil qualities and make it suitable for building permanent constructions, it is stabilized with small amount of cement as the binding agent.

When a small amount of cement (5-10%) is added into the soil and then compressed mechanically to make building blocks, the resultant blocks are water resistant and their compressive strength highly increased making it strong enough to build buildings up to 3 stories high without using columns, when using normal blocks that are cemented together with mortar. The introduction of Stretcher Blocks is gradually revolutionalising the building industry as the Stretcher Blocks technology reduces construction costs as cement mortar is not required to lay the blocks, and construction time and labor is significantly reduced.

Our company takes an innovative uniquely effective approach to housing technology compared to traditional Somali way of building houses.

The benefits are:

- ◆ Improve aging control by reducing cracking and moisture damage.
- ◆ It utilizes the in-place soils wherever possible.
- ◆ Offers cost-effective alternative to mortar when laying blocks saving up to 30% of the construction cost in terms of plaster, speed of laying blocks and the neatness of the walls.
- ◆ Provide a lighter surface that do not absorb heat.
- ◆ Employ products proven to be environmentally safe.
- ◆ Never harm vegetation or wildlife.

Are you interested in stronger, longer-lasting building solutions?

We at Bulsho Eco-Construction can work with you to find the ideal solution. Whether you're interested in handling the application yourself or relying on our team of highly trained technicians, we can offer you a solution engineered to bring you optimal results.

Our Stretcher Blocks Products Include Two Sizes Of Blocks:

- 1) Stretcher Blocks (9" by 8" by 115mm)
- 2) Stretcher Blocks (200mm x 115mm x 100mm)

Hydraform Soil Interlocking Block
(9" by 8" by 115mm)

Price: \$ 0.45

Standard Interlocking Soil Block
(200mm x 115mm x 100mm)

Price: \$ 0.40

II. Concrete Foundation Block and Cinder Hollow Block

Bulsho Eco-Construction is utilizing four types of concrete blocks, using Stumble Block Technology. These four types are:

1. Interlocking Hollow Block:

This is an interlocking hollow block which uses very little or no cement at all on the joints. The blocks are 400mm x 200mm x 200mm which makes building easier, neat and quicker as it doesn't require a lot of plastering. The block bottom is flat and smooth, strong - making sure the building is of high quality.

2. Cinder Hollow Blocks Bulsho Eco-Construction also offers two hollow core designs.

This cinder hollow block design is 400mm x 200mm x 200mm and come with a button which is closed up and this enables one to use very little cement and get a uniform walls which are strong. If exposed to moisture cinder blocks tend to disintegrate, therefore at Bulsho Eco-Construction we offer blocks treated with water sealants.

3. Partitioning Interlocking Hollow Block:

This is 400mm x 100 x 100mm for interlocking hollow block which uses very little or no cement at all on the joints. These reduce the internal area of the room which isn't the case when using bigger blocks.

4. Cinder Partitioning Hollow Block:

These blocks are 400mm x 100 x 100mm used for internal room partitioning.
